01

HR Employee Attrition

Understanding the patterns behind employee attrition.

Power BI / HR analytics / Data visualization

THE QUESTION

How can employee data support better retention conversations?

THE WORK

Explored employee attrition patterns and presented findings through a Power BI dashboard, with a focus on insights that can inform retention improvements.

PROJECT FLOW

Employee data > Attrition analysis > Retention insights

Schematic overview of the workflow.

PRACTICAL VALUE

Makes employee attrition patterns easier to explore and discuss with business stakeholders.

View repository >

02

Logistics Dashboard

A clearer view of trips, deliveries, and operational performance.

Power BI / Operational reporting / KPIs

THE QUESTION

How can trip and delivery data become useful operational reporting?

THE WORK

Built a Power BI analysis of trip values, delivery times, and performance metrics for drivers and customers, bringing operational measures into an interactive reporting view.

PROJECT FLOW

Trip & delivery data > Performance metrics > Operational dashboard

Schematic overview of the workflow.

PRACTICAL VALUE

Supports a shared view of delivery performance for operational review.

03

Game Recommendation System

Exploring personalized game discovery on Steam.

Python / Unsupervised learning / Jupyter Notebook

THE QUESTION

How can user behavior and preferences guide game recommendations?

THE WORK

Developed a recommendation project using unsupervised learning to explore personalized Steam game suggestions based on user behavior and preferences.

PROJECT FLOW

Behavior & preferences > Unsupervised learning > Game recommendations

Schematic overview of the workflow.

PRACTICAL VALUE

Connects machine learning concepts with a practical recommendation use case.

04

Phobia Types Analysis

From raw observations to an exploratory data story.

Python / Pandas / Matplotlib

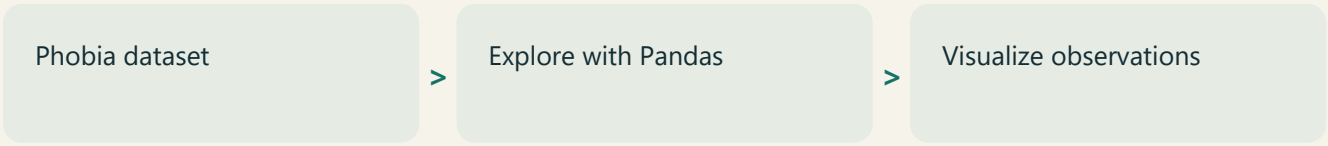

THE QUESTION

What patterns can be explored in a dataset about phobia types?

THE WORK

Used Python in Jupyter Notebook to explore phobia types, work with tabular data using Pandas, and communicate observations through Matplotlib visualizations.

PROJECT FLOW

Schematic overview of the workflow.

PRACTICAL VALUE

Demonstrates an exploratory analysis workflow and visual communication of data.

05

Task Tracking & Reporting

Connecting task entry with progress reporting.

Power Apps / Power BI / Workflow design

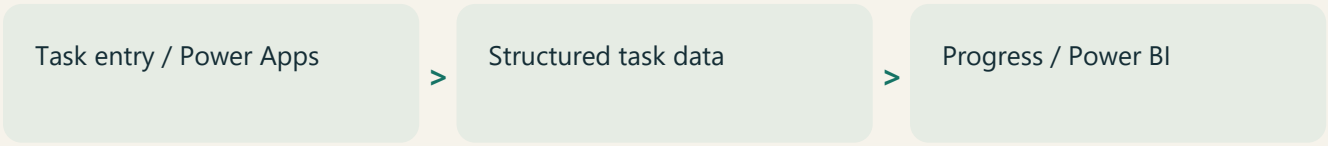

THE QUESTION

How can task collection and follow-up share one organized workflow?

THE WORK

Created a task-entry app covering ownership, department, dates, priority, notes, and attachments, paired with Power BI reporting to follow progress and deadlines.

PROJECT FLOW

Schematic overview of the workflow.

PRACTICAL VALUE

Brings task entry and reporting together to reduce fragmented manual follow-up.

06

Form-to-Email Automation

A first automation project with a useful everyday flow.

n8n / Google Sheets / Email

THE QUESTION

How can a new form submission be recorded and announced automatically?

THE WORK

Connected a form to Google Sheets and email in n8n. Each new submission is saved to the sheet and triggers an email notification.

PROJECT FLOW

Form submission > Save to Google Sheets > Email notification

Schematic overview of the workflow.

PRACTICAL VALUE

Demonstrates a simple, repeatable automation for collecting submissions and sending notifications.
